J.M. Teague Engineering & Planning (JMTE) was asked by the Town of Bryson City to conduct a comprehensive sign and pavement marking review on all Town owned public roadways within Bryson City Town Limits. The assessment consisted of a two-phase review: a daytime review to assess placement, size, positioning, and appearance of each sign and pavement marking and a nighttime review to assess the reflectivity of each.

Deliverables included a comprehensive engineering report identifying deficiencies, maintenance needs, or non-compliance issues with State and Federal guidelines, and recommended modifications to regulatory signs and pavement markings. These were presented to the town in hardcopy and digital format to be used to further develop and budget a sign and pavement marking rehabilitation budget schedule.
