J.M. Teague Engineering & Planning (JMTE) was asked by the Town of Black Mountain to conduct a comprehensive sign and pavement marking assessment and review on all Town owned public roadways within Black Mountain Town Limits - Approximately 44 miles. The assessment consisted of a two phase review - daytime and nighttime. The daytime review primarily focused on functionality and included placement, size, positioning, and appearance of signs and pavement markings. The nighttime review primarily focused on reflectivity.

Deliverables included a comprehensive engineering report identifying deficiencies, maintenance needs, or non-compliance issues with State and Federal guidelines, and recommended modifications to regulatory signs and pavement markings. These were presented to the town in hardcopy and digital format to be used to further develop a sign and pavement marking budget and rehabilitation schedule.
