Fax: (828) 456-8797

J.M. Teague Engineering & Planning served as a Traffic Engineering Consultant to gather data, analyze, and make recommendations for downtown parking and pedestrian safety improvements.

The specific goal of the project was to reconfigure nine parallel parking spaces to accommodate pedestrian bulb outs and crosswalk configuration. Part of the project included an intersection realignment in order to reduce pedestrian crossing width by 50% and to better align left turn movements from the side street.
