As Project Team Leader, J.M. Teague Engineering & Planning Partnered with Kostelec Planning and Brooks Engineering to conduct a Complete Streets study to address the need for multi-modal accommodations to the intersection and the adjacent corridor of North Main and Walnut Street in Waynesville, NC.

Work consisted of traffic counts, intersection analysis, field observation, public input workshops, and final document presentation to local and state officials. The project is slated for construction in 2021.
