J.M. Teague Engineering & Planning (JMTE) performed a survey encompassing all known Town maintained sidewalks; including sidewalks along Powell Bill designated streets, streets not qualified for Powell Bill designation, and park/facility type streets.

The purpose of this study was to develop an additional tool for the prioritization of sidewalk rehabilitation funds within the town of Rutherfordton. Segments were strategically determined based on natural street lengths, significant roadway features, and intersecting roads. The survey was performed in a manner established by JMTE with research into other surveys performed by transportation specialists across the country.

Points collected and assigned to various segments of the sidewalk were based on observed and measured sidewalk distress, the presence and design of wheelchair ramps, and the sidewalk widths.
