J.M. Teague Engineering & Planning worked with NCDOT and the Town of Franklin, NC, on this comprehensive bicycle and pedestrian plan. JMTE conducted on-site technical reviews of the bicycle and pedestrian infrastructure, making project recommendations based on steering committee prioritization with the goal of making sure the town's transportation networks are suitably connected and well balanced.

The Plan recommended numerous sidewalk construction and intersection improvements, an urban sidepath multiuse trail system, bike lane additions within the right-of-way, and expansions and connectors to the greenway system.
